

## **\_\_RALLYMETER . EXTERNAL GPS**

Rallymeter has been optimized for the use of external GPS devices like Garmin GLO that connect to the iPhone or iPad via bluetooth and offer up to 5 times better accuracy and up to 10 times faster speed than the internal GPS.

Operation:

1. Start the external GPS device
2. Go to the Apple / Bluetooth configuration
3. Connect the bluetooth device with our iPhone / iPad
4. Open Rallymeter
5. Go to settings / GPS and connect it
6. From this moment Rallymeter will use the external device as the main meter. We can make all the options we normally do with a wheel sensor.

**It is important to fix receiver in a place where the GPS signal arrives with the minimum of obstacles, for example the glass in front of the vehicle.**
